

Dear Contracted Party,

ICANN org has released Version 3.1.0 of the [Registration Data Access Protocol \(RDAP\) Conformance Tool](#).

This update adds further validations for RFC 9537 redactions, a validation for the “registrar expiration” event, fixes some false positive validations, and properly scopes some existing validations to be specific to either registries or registrars when they had previously applied to both.

Version 3.1.0 is available as an online service at [webrdapct.icann.org](http://webrdapct.icann.org) and as a compiled JAR file in the [project's GitHub release area](#). The [RDAP Conformance Tool User's Manual](#) is also available online for using the tool.

If you have any questions, please email [globalsupport@icann.org](mailto:globalsupport@icann.org).

Regards,  
GDS Technical Services
