

Amendment No 9 to Registry Agreement

The Internet Corporation for Assigned Names and Numbers and Binky Moon, LLC agree, effective as of _____ (“Amendment No. 9 Effective Date”), that the modification set forth in this amendment No. 9 (the “Amendment”) is made to the 07 August 2014 .irish Registry Agreement between the parties, as amended (the “Agreement”).

The parties hereby agree to amend Exhibit A of the Agreement by deleting the following sections 4, 5, 6, 7, 8, 9 and 10 in their entirety:

[START OLD TEXT]

“4. Internationalized Domain Names (IDNs)

Registry Operator may offer registration of IDNs at the second and lower levels provided that Registry Operator complies with the following requirements:

4.1. Registry Operator must offer Registrars support for handling IDN registrations in EPP.

4.2. Registry Operator must handle variant IDNs as follows:

4.2.1. Variant IDNs (as defined in the Registry Operator’s IDN tables and IDN Registration Rules) will be blocked from registration.

4.3. Registry Operator may offer registration of IDNs in the following languages/scripts (IDN Tables and IDN Registration Rules will be published by the Registry Operator as specified in the ICANN IDN Implementation Guidelines):

- 4.3.1.** Arabic Script
- 4.3.2.** Chinese Language
- 4.3.3.** Cyrillic Script
- 4.3.4.** Devanagari Script
- 4.3.5.** French Language
- 4.3.6.** German Language
- 4.3.7.** Greek Script
- 4.3.8.** Hebrew Script
- 4.3.9.** Japanese Language
- 4.3.10.** Korean Language
- 4.3.11.** Latin Script
- 4.3.12.** Spanish Language
- 4.3.13.** Tamil Script
- 4.3.14.** Thai Script

5. Domains Protected Marks List (DPML)

The DPML is a service that allows trademark rights holders to block certain labels from registration across multiple TLDs operated by the Registry Operator. The blocked names must comply with the provisions described in Specification 5, Section 3.3 of the Registry Agreement. Domain Names blocked by the DPML service will be either an exact match of a label or will contain an exact match of such labels, or may include domain names that are a misspelling or contain a misspelling of a label. Blocked labels do not prevent other trademark rights holders or DPML holders from unblocking the label and registering the domain name. In some instances, approval from the applicable DPML holder may be required for a third party with the same trademark to register the blocked name.

6. Registration Validation per Applicable Law

Registry Operator may perform registration validation to comply with applicable local law in a given jurisdiction. The registration validation process, by which the Registry Operator subjects domain name registrations to validation, will be subject to the criteria required by the applicable local law in the jurisdiction. Domain names that are subject to the registration validation process in the subject jurisdiction that do not pass registration validation in that jurisdiction may be suspended, deleted or otherwise updated by the Registry Operator as required by applicable local law.

6.1. Supplementary Registration Proxy

Registry Operator may offer this service through a Supplementary Registration Proxy (SRP), which provides a secondary gateway for access to Shared Registration System (SRS)/EPP, RDDS (via WHOIS – port 43 –, web-based Directory Service, RDAP, or any combination), or both, subject to the following requirements:

- 6.1.1.** Any Registry Service offered through an SRP shall be consistent and coherent with the corresponding primary Registry Service. In particular, a Registry Service offered through an SRP must provide the same Registration Data; offer the same functionality; and be subject to the same specifications, service-level requirements, and emergency transition thresholds (as specified in Specification 10) as the corresponding primary Registry Service offered by the Registry Operator.
- 6.1.2.** Registry Operator must give ICANN a ten (10) calendar days advance notice of any new or changed SRP hostnames.
- 6.1.3.** Registry Operator must obtain ICANN's approval pursuant to Section 7.5 of the Agreement for any subcontracting arrangement that relates to an SRP.
- 6.1.4.** Registry Operator may offer an SRP provider access to Registration Data as long as such access complies with all the terms of this Agreement and any applicable laws.

6.1.5. Registry Operator shall provide additional Registry Functions Activity Report(s) for each SRP jurisdiction according to the requirements of Specification 3 in a manner agreed with ICANN. If an SRP instance did not offer a particular RegistryService(s) (e.g. DNS) in a reporting period, the fields related to the Registry Service(s) not offered in the additional Registry Functions Activity Report(s) must contain the string "SRP".

6.1.6. Within ten (10) calendar days of any ICANN request Registry Operator shall provide additional Registration Data file(s) for each SRP instance according to the requirements of section 3.1 of Specification 4 with the data objects for which the SRP operator is allowed to process transactions in the SRS.

6.1.7. The SRP will pass EPP commands and responses between the registrar and primary RSP system, which will remain the authoritative source of registry data.

6.1.8. The SRP will comply with the standards and service level requirements described in the Registry Agreement for the Registry Service for which there is a proxy.

7. Registry Lock

Registry Operator may offer the Registry Lock service, which is a registry service that allows an authorized representative from the sponsoring Registrar to request the activation or deactivation of any of the following EPP statuses: serverUpdateProhibited, serverDeleteProhibited and/or serverTransferProhibited.

8. Dropzone Service

Registry Operator may offer the Dropzone service, which is a Registry Service that will manage the release of domain names that have reached the end of their life cycle.

The Dropzone is a separate system, parallel to the main EPP system, that will manage on a daily basis the release of domain names that have been purged for a short period of time, called the Dropzone. Any TLD-accredited registrars may use the Dropzone to register a recently-purged domain name.

On a daily basis, at the end of the Dropzone period, the Registry will execute an awarding process, which will select, per domain name, the first domain creation request submitted (first come, first serve).

9. Bulk Transfer After Partial Portfolio Acquisition

Bulk Transfer After Partial Portfolio Acquisition ("BTAPPA") is a registry service available to

consenting registrars in the circumstance where (i) one ICANN-accredited registrar purchases, by means of a stock or asset purchase, merger or similar transaction, a portion but not all, of another ICANN-accredited registrar's domain name portfolio in the TLD or (ii) a newly accredited registrar (gaining registrar) requests a transfer of all domain names from the losing registrar for which the gaining registrar has served as the reseller. Upon completion of the transfer, the gaining registrar is the new sponsoring registrar. The gaining registrar must certify the BTAPPA would not otherwise qualify under ICANN's Transfer Policy.

At least fifteen days before completing a BTAPPA, the losing registrar must provide written notice of the bulk change of sponsorship to all domain name registrants for names involved in the BTAPPA. The notice must include an explanation of how the RDDS record will change after the BTAPPA occurs and customer support and technical contact information of the gaining registrar.

The losing registrar's existing Registration Agreement with customers must permit the transfer of domain names in the event of acquisition by another party. A single BTAPPA request may be submitted for transfers from multiple losing registrars provided they are Affiliated Registrars as defined by the 2013 or subsequent Registrar Accreditation Agreement.

The expiration dates of transferred registrations are not affected and, therefore, there are no ICANN fees. Once the BTAPPA is complete, there is no grace period to reverse the transfer.

Domain names in the following EPP statuses at the time of the BTAPPA execution shall not be transferred:

- Base statuses: pendingTransfer, pendingDelete.
- Redemption Grace Period ("RGP") statuses: redemptionPeriod, pendingRestore, pendingDelete.

Domain names that are within a grace period window are subject to BTAPPA, but Registry Operator may decline to provide a credit for those names deleted after the BTAPPA and prior to the expiration of the applicable grace period window.

Registry Operator must reject a BTAPPA request if there is reasonable evidence that a transfer under BTAPPA is being requested in order to avoid fees otherwise due to Registry Operator or ICANN. Registry Operator has discretion to reject a BTAPPA request if a registrar with common ownership or management or both has already requested BTAPPA service within the preceding six-month period.

10. Label Blocking Service

Label Blocking is a service that allows rights holders to block certain labels from registration. The blocked domain names must comply with the provisions described in Specification 5, Section 3.3 of the Registry Agreement.

Domain names blocked by the Label Blocking Service will be either an exact match of a label or will contain an exact match of such labels, or may include domain names that are a misspelling of, or contain a misspelling of a label. Where two or more parties have verified rights for the same label or string, and one party wishes to unblock the label to register an associated domain name, approval will be required from the other rights holder(s)."

[END OLD TEXT]

The parties hereby further agree to amend Exhibit A of the Agreement by replacing the deleted sections above with the following new text as new sections 4, 5, 6, 7, 8, 9 and 10:

[START NEW TEXT]

"4. Internationalized Domain Names (IDNs)

Registry Operator may offer registration of IDNs at the second and lower levels provided that Registry Operator complies with the following requirements:

4.1. Registry Operator must offer Registrars support for handling IDN registrations in EPP.

4.2. Registry Operator must handle variant IDNs as follows:

4.2.1. Variant IDNs (as defined in the Registry Operator's IDN tables and IDN Registration Rules) will be blocked from registration.

4.3. Registry Operator may offer registration of IDNs in the following languages/scripts (IDN Tables and IDN Registration Rules will be published by the Registry Operator as specified in the ICANN IDN Implementation Guidelines):

- 4.3.1.** Arabic Language
- 4.3.2.** Chinese Language
- 4.3.3.** Cyrillic Script
- 4.3.4.** Devanagari Script
- 4.3.5.** French Language
- 4.3.6.** German Language
- 4.3.7.** Greek Script
- 4.3.8.** Hebrew Language
- 4.3.9.** Japanese Language
- 4.3.10.** Korean Language
- 4.3.11.** Latin Script
- 4.3.12.** Spanish Language
- 4.3.13.** Tamil Script
- 4.3.14.** Thai Script

5. Domains Protected Marks List (DPML)

The DPML is a service that allows trademark rights holders to block certain labels from registration across multiple TLDs operated by the Registry Operator. The blocked names must comply with the provisions described in Specification 5, Section 3.3 of the Registry Agreement. Domain Names blocked by the DPML service will be either an exact match of a label or will contain an exact match of such labels, or may include domain names that are a misspelling or contain a misspelling of a label. Blocked labels do not prevent other trademark rights holders or DPML holders from unblocking the label and registering the domain name. In some instances, approval from the applicable DPML holder may be required for a third party with the same trademark to register the blocked name.

6. Registration Validation per Applicable Law

Registry Operator may perform registration validation to comply with applicable local law in a given jurisdiction. The registration validation process, by which the Registry Operator subjects domain name registrations to validation, will be subject to the criteria required by the applicable local law in the jurisdiction. Domain names that are subject to the registration validation process in the subject jurisdiction that do not pass registration validation in that jurisdiction may be suspended, deleted or otherwise updated by the Registry Operator as required by applicable local law.

6.1. Supplementary Registration Proxy

Registry Operator may offer this service through a Supplementary Registration Proxy (SRP), which provides a secondary gateway for access to Shared Registration System (SRS)/EPP, RDDS (via WHOIS – port 43 –, web-based Directory Service, RDAP, or any combination), or both, subject to the following requirements:

- 6.1.1.** Any Registry Service offered through an SRP shall be consistent and coherent with the corresponding primary Registry Service. In particular, a Registry Service offered through an SRP must provide the same Registration Data; offer the same functionality; and be subject to the same specifications, service-level requirements, and emergency transition thresholds (as specified in Specification 10) as the corresponding primary Registry Service offered by the Registry Operator.
- 6.1.2.** Registry Operator must give ICANN a ten (10) calendar days advance notice of any new or changed SRP hostnames.
- 6.1.3.** Registry Operator must obtain ICANN's approval pursuant to Section 7.5 of the Agreement for any subcontracting arrangement that relates to an SRP.
- 6.1.4.** Registry Operator may offer an SRP provider access to Registration Data as long as such access complies with all the terms of this Agreement and any applicable laws.

6.1.5. Registry Operator shall provide additional Registry Functions Activity Report(s) for each SRP jurisdiction according to the requirements of Specification 3 in a manner agreed with ICANN. If an SRP instance did not offer a particular RegistryService(s) (e.g. DNS) in a reporting period, the fields related to the Registry Service(s) not offered in the additional Registry Functions Activity Report(s) must contain the string "SRP".

6.1.6. Within ten (10) calendar days of any ICANN request Registry Operator shall provide additional Registration Data file(s) for each SRP instance according to the requirements of section 3.1 of Specification 4 with the data objects for which the SRP operator is allowed to process transactions in the SRS.

6.1.7. The SRP will pass EPP commands and responses between the registrar and primary RSP system, which will remain the authoritative source of registry data.

6.1.8. The SRP will comply with the standards and service level requirements described in the Registry Agreement for the Registry Service for which there is a proxy.

7. Registry Lock

Registry Operator may offer the Registry Lock service, which is a registry service that allows an authorized representative from the sponsoring Registrar to request the activation or deactivation of any of the following EPP statuses: serverUpdateProhibited, serverDeleteProhibited and/or serverTransferProhibited.

8. Dropzone Service

Registry Operator may offer the Dropzone service, which is a Registry Service that will manage the release of domain names that have reached the end of their life cycle.

The Dropzone is a separate system, parallel to the main EPP system, that will manage on a daily basis the release of domain names that have been purged for a short period of time, called the Dropzone. Any TLD-accredited registrars may use the Dropzone to register a recently-purged domain name.

On a daily basis, at the end of the Dropzone period, the Registry will execute an awarding process, which will select, per domain name, the first domain creation request submitted (first come, first serve).

9. Bulk Transfer After Partial Portfolio Acquisition

Bulk Transfer After Partial Portfolio Acquisition ("BTAPPA") is a registry service available to

consenting registrars in the circumstance where (i) one ICANN-accredited registrar purchases, by means of a stock or asset purchase, merger or similar transaction, a portion but not all, of another ICANN-accredited registrar's domain name portfolio in the TLD or (ii) a newly accredited registrar (gaining registrar) requests a transfer of all domain names from the losing registrar for which the gaining registrar has served as the reseller. Upon completion of the transfer, the gaining registrar is the new sponsoring registrar. The gaining registrar must certify the BTAPPA would not otherwise qualify under ICANN's Transfer Policy.

At least fifteen days before completing a BTAPPA, the losing registrar must provide written notice of the bulk change of sponsorship to all domain name registrants for names involved in the BTAPPA. The notice must include an explanation of how the RDDS record will change after the BTAPPA occurs and customer support and technical contact information of the gaining registrar.

The losing registrar's existing Registration Agreement with customers must permit the transfer of domain names in the event of acquisition by another party. A single BTAPPA request may be submitted for transfers from multiple losing registrars provided they are Affiliated Registrars as defined by the 2013 or subsequent Registrar Accreditation Agreement.

The expiration dates of transferred registrations are not affected and, therefore, there are no ICANN fees. Once the BTAPPA is complete, there is no grace period to reverse the transfer.

Domain names in the following EPP statuses at the time of the BTAPPA execution shall not be transferred:

- Base statuses: pendingTransfer, pendingDelete.
- Redemption Grace Period ("RGP") statuses: redemptionPeriod, pendingRestore, pendingDelete.

Domain names that are within a grace period window are subject to BTAPPA, but Registry Operator may decline to provide a credit for those names deleted after the BTAPPA and prior to the expiration of the applicable grace period window.

Registry Operator must reject a BTAPPA request if there is reasonable evidence that a transfer under BTAPPA is being requested in order to avoid fees otherwise due to Registry Operator or ICANN. Registry Operator has discretion to reject a BTAPPA request if a registrar with common ownership or management or both has already requested BTAPPA service within the preceding six-month period.

10. Label Blocking Service

Label Blocking is a service that allows rights holders to block certain labels from registration. The blocked domain names must comply with the provisions described in Specification 5, Section 3.3 of the Registry Agreement.

Domain names blocked by the Label Blocking Service will be either an exact match of a label or will contain an exact match of such labels, or may include domain names that are a misspelling of, or contain a misspelling of a label. Where two or more parties have verified rights for the same label or string, and one party wishes to unblock the label to register an associated domain name, approval will be required from the other rights holder(s)."

[END NEW TEXT]

Each party hereby acknowledges and agrees that this Amendment shall not be construed as a waiver of any provision of the Agreement by any party hereto, nor shall it in any way affect the validity of, or the right of any party hereto, to enforce the provisions of the Agreement. The parties agree that, except as set forth in this Amendment and any prior duly authorized and executed amendments, the current terms and conditions of the Agreement will remain in full force and effect. All capitalized terms not defined will have the meaning given to them in the Agreement. This Amendment may be executed in counterparts, each of which shall be deemed an original, and all of such counterparts taken together shall constitute one and the same instrument.
